# The first three bots in RankUp Chess, and how to beat them

What each bot is built to do, what our test saw, and how to beat it.

Cut along the dashed lines to keep a strip by the board.

## Baby Bean

First steps · Still learning to checkmate

**WHAT IT DOES (THE APP'S OWN DESIGN)**

Never takes a piece you leave for free (it still swaps). Built not to play a checkmate in one.

**WHAT OUR TEST SAW**

Left a piece hanging in 92 games out of 100, first around move 7

**HOW TO BEAT IT**

**Take what it leaves, then finish with a checkmate**

## Sleepy Sloth

Starter

**WHAT IT DOES (THE APP'S OWN DESIGN)**

Takes a free piece about half the time; plays a checkmate it sees about half the time

**WHAT OUR TEST SAW**

Left a piece hanging in 94 out of 100, first around move 8; took ours in 50 out of 100

**HOW TO BEAT IT**

**Take what it leaves, and start guarding your own pieces**

## Pip the Pawn

Level 1

**WHAT IT DOES (THE APP'S OWN DESIGN)**

Always plays a checkmate in one

**WHAT OUR TEST SAW**

Left a piece hanging in 87 out of 100, first around move 9; took ours in 55 out of 100

**HOW TO BEAT IT**

**Both questions, every move**

**TWO QUESTIONS BEFORE EVERY MOVE**

## 1. Is anything of theirs free?

## 2. Is anything of mine?

How we tested: the app's own level 5 bot played 200 games against each bot (7 November 2026), and we sampled each bot's reply 1,000 times to a piece left hanging. A free piece means one you can take and still come out ahead, even if your piece is taken back.

Each bot's behaviour is quoted from the app's own code; every number is from our test, run on a computer with the app's own bot code.
From the RankUp Chess video 'How to Beat the Easiest Chess Bots'. RankUp Chess is an offline chess app for children.
