50 Chess Puzzles for Kids

A chess-vision pack: look at the board, find the move, write it down. From first checkmates to real sacrifices.

Beginner · 1 to 15
One-move checkmates and simple forks. Under 600, or just starting.

Intermediate · 16 to 35
Two-move pins, discovered attacks and deflections. About 600 to 1000.

Advanced · 36 to 50
Three-move sacrifices for aspiring club players. 1000 and up.

For the grown-up

1. **One puzzle at a time.** Each says whose turn it is; the board is drawn from that side, so the player always looks "up" the board.
2. **Write it down.** There are lines under every puzzle. Squares are named by the letters along the bottom and the numbers up the side (a1 to h8).
3. **Set it up if it helps.** Copying a puzzle onto a real board trains the same skill: seeing the move before playing it.
4. **Check afterwards.** The answers are on the last two pages, with the reply the other side will make.
5. **Stuck?** The hint under each puzzle says what to look for. Coming back to a puzzle tomorrow works surprisingly often.

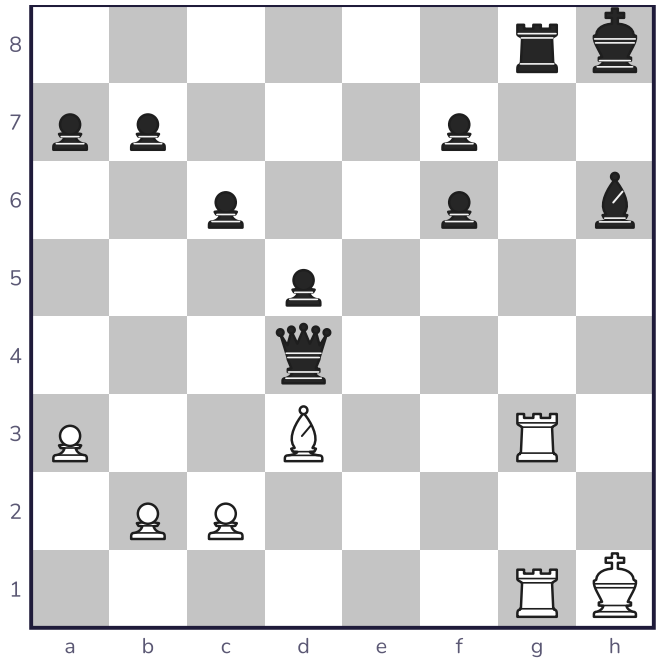

Print double-sided and staple the left edge to make a 16-page booklet.

Puzzles from the Lichess puzzle database (free to use, CC0; database.lichess.org), each checked move by move. Pieces from RankUp Chess, our offline chess academy for kids, which has 30,000+ puzzles like these.
